

CORE CONNECT – LEAN AND LIGHT INTRANET ON MICROSOFT 365

At Nexer, we have developed a lean and light intranet product called Core Connect. Core Connect retains the flexibility of SharePoint, making it an excellent fit for all types of organisations, adding valuable features, and improving usability for both users and editors of the intranet. Core Connect builds on SharePoint and integrates with Microsoft Teams and Viva, creating a seamless employee experience and digital workplace within Microsoft 365.

BASED ON USER NEEDS

We have worked with our Swedish and international customers for over ten years, building great intranets that make a difference for both users and businesses. From this experience we have also built Core Connect, which is based on real user needs and continuous discussions with our customers and Microsoft.

AN “EVERGREEN” SOLUTION

Core Connect is an “evergreen” solution – just like SharePoint. This means that you will no longer need to run expensive upgrade projects to get the latest changes, and you can also completely uninstall Core Connect without having to change platforms. Your content and data will remain safely stored within your Microsoft 365 suite.

With Core Connect, you get

- A product that doesn't interfere with the continuous development by Microsoft in SharePoint, Teams, Viva, and the rest of Microsoft 365
- Extra features by Nexer, always based on user needs
- Improved support for governance and maintenance
- An evergreen SharePoint solution that can be continuously upgraded with ease
- Training to ensure your editors get the skills they need to create and manage their content
- Custom development based on your organisation's needs
- A partner that delivers more than just technology. We can help you with project activities and requirements including navigation structure, search results, and content, ensuring the information will reach and engage your users

BETTER WITH A LITTLE CARE

Combine with our Care support agreement to get proactive support with a dedicated Customer Success Manager and SLA.

MORE THAN JUST TECHNOLOGY

An intranet project is not just about the technical implementation – to get a great intranet, you need to keep strategy, people, and technology in mind throughout the entire journey. We can help you every step of the way!

STRATEGY

Know where you are going

We can help you discover your user and business needs, and set up a strategy and goals for your intranet and digital workplace.

- Information architecture
- Document management
- Governance and compliance
- Search
- Accessibility
- Measurement
- Project management

PEOPLE

Take care of your people

For the intranet to become successful, you need the people to develop alongside it. We can help you with adoption and training as well as change management.

- User research
- Content strategy
- Change management
- Change communication
- Training

TECHNOLOGY

Manage the technology

We have worked with intranets built on SharePoint for more than ten years, and are a Gold partner for Microsoft with access to their latest roadmaps.

- SharePoint modern/M365
- Custom development
- No-code or low-code solutions
- Migration
- Care Support

SOME KEY FEATURES IN CORE CONNECT

We will continuously develop Core Connect based on user studies, analysis, and customer needs. The platform's first version will include some key features that have proven valuable for users and editors in various organisations.

Alerts

Core Connect Alerts are highly customizable status messages that can be targeted to specific audiences and scheduled to appear between a given start and end date. The alerts will appear on all intranet pages and as notifications in Teams.

Launcher | My tools

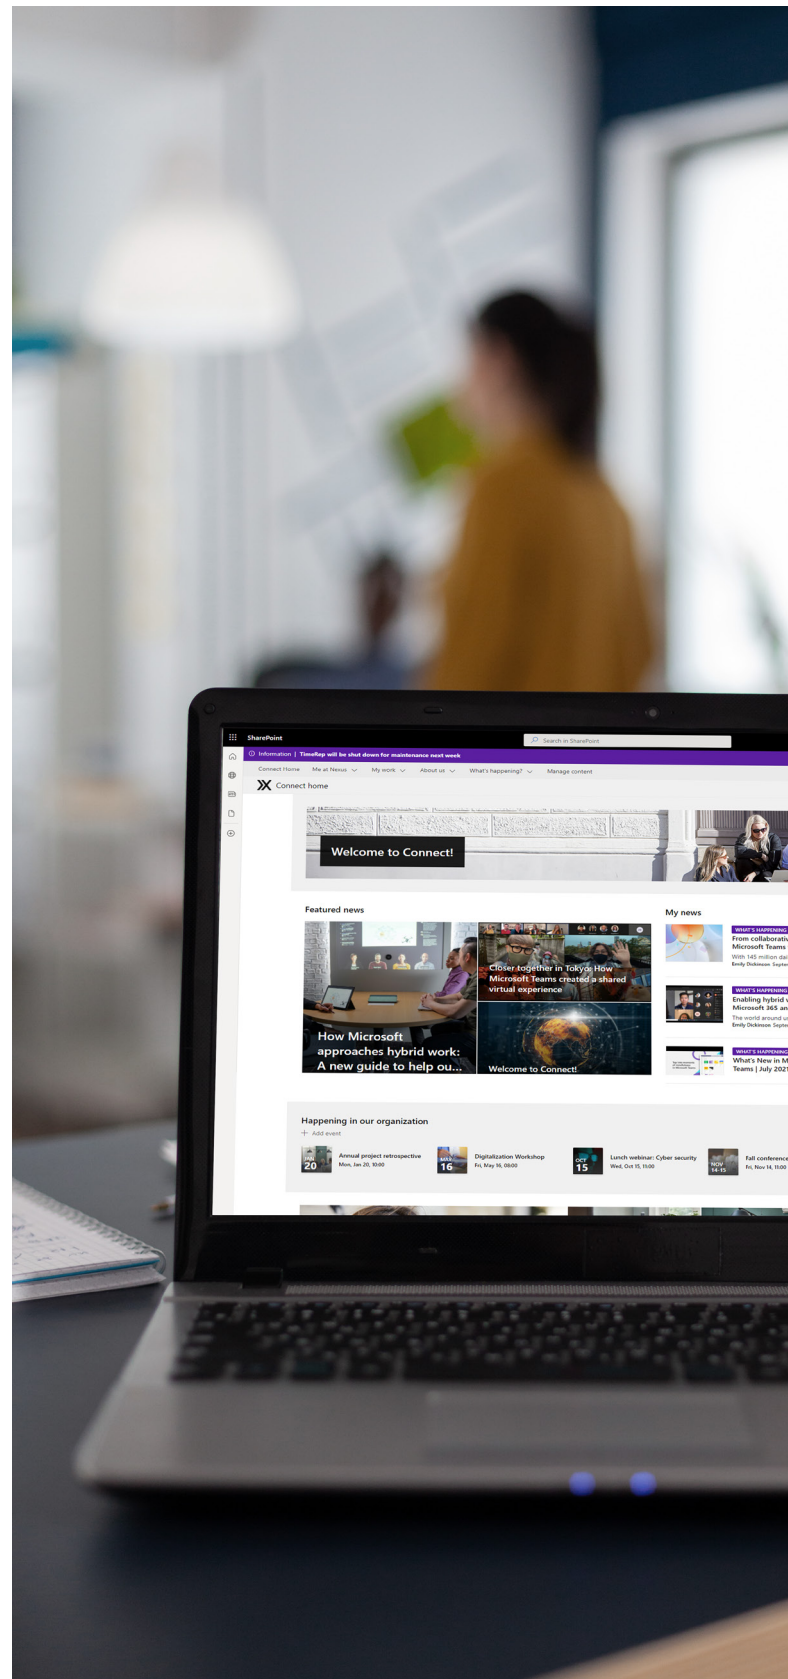

In the Core Connect tools library, you can find links to various apps and tools your organisation uses. The library is easily accessible directly from Teams using our Launcher Teams app. You can push different tools to specific audiences, or users can add their own. Users can browse a catalogue of all available tools presented with descriptive texts and introduction videos.

Audience targeting made easy

SharePoint already has audience targeting in some features. However, the out-of-the-box version is difficult to manage both for admins and users. In Core Connect, users can overview and select their audiences, editors can easily target their news and pages, and admins can easily manage the list of audiences that will be available.

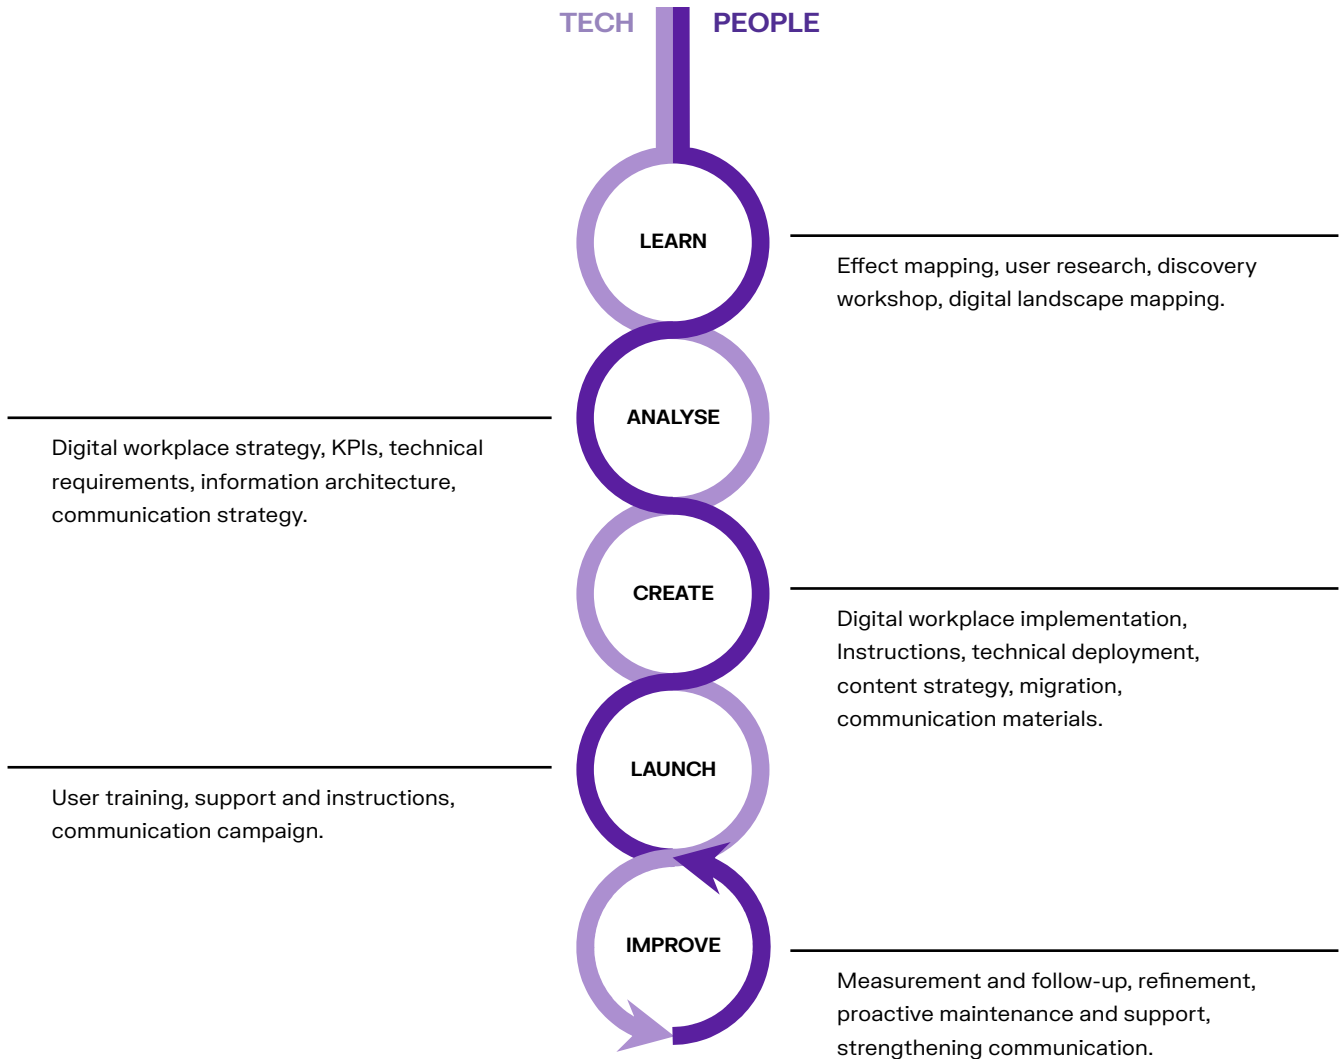

Governance features

Core Connect will provide you with a range of administrative tools to help you better manage your intranet and its content - from the Content Overview web feature which makes it easier to manage your content, to the Page Template Manager that helps you maintain a coherent look and feel by syncing templates across sites.

DELIVERING OUTSTANDING RESULTS

No matter the size of the project, we follow our best practice process because we know it is the right way to deliver outstanding results. However, the focus and time spent in each phase and the activities we work on with you can vary based on the project scope.

WANT TO KNOW MORE ABOUT CORE CONNECT?

Nexer Worklife is a part of Nexer Group. We are experts in digital workplaces based on Microsoft 365. Through digital revolution, we create a better digital worklife built on modern technology, always keeping the user in focus.
